Original Quarto Reveal Demo

Original demo for a Quarto Reveal presentation:

<https://quarto.org/docs/presentations/revealjs/demo/#/title-slide>

The current theme adds some useful features implemented with much help from ChatGPT (I am no web developer 🙏)

I also plan on adding more and more features as the need presents itself!
Or, if you have any suggestions, let me know here:

Changing The Theme Color

The minimalist style of the theme is intended to accommodate multiple theme colors. The theme color can be easily modified:

Open the **Fabio_theme.scss** file.

↓

Find and edit the value of the **\$theme-color:** variable with the desired theme color. Save.

↓

Render .qmd file.

Note: other global variables such as font and font size can also be changed in the same way.

A video of how to change the theme color can be found at the following link:

Zoomable Images

Tired of hearing that your figures are too small to read?? Custom JS zoom options for figures on [left-click](#)! To reset to original position, [right-click](#) on image.

Note: Using `.absolute` to position images will interfere with the zoom feature. If zoom function is needed, I recommend creating an absolutely position div and place the image inside it like so:

```
1 <div style="position: absolute; top:60
2
